133-106 multifunction fixing brackets

Introduction

Sealed Systems are the most commonly used form of central heating used in the UK and most of the other parts of the world.

Ease of installation makes it particularly attractive to the installer, alleviating the need to fit, feed and vent tanks in a central heating system.

A closed or sealed heating system must include an expansion vessel and other ancillary components to accommodate expansion of the water.

Design

The 133-1065 and 133-1066 multifunction fixing brackets are designed to locate several of these ancillary components in a convenient and accessible position.

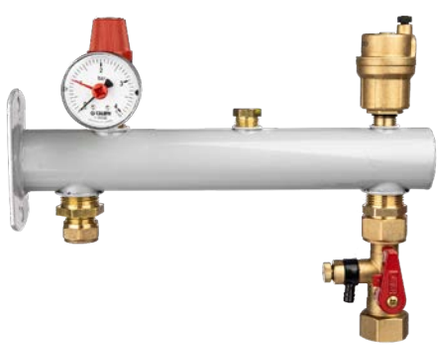
The wall mounted bar bracket holds these components in a central location in an elevated position close to the boiler.

The bar bracket and components are supplied for assembly during installation.

Both brackets are suitable for expansion vessels up to 25 litres in size with a ¾" connection thread and for systems up to 10 bar working pressure.

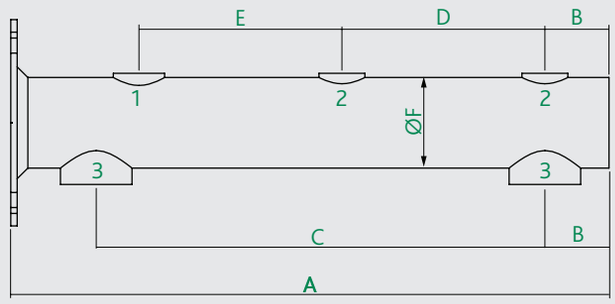
Multifunction Fixing Brackets

133-1065 - multifuncation fixing bracket



133-1066 - multifuncation fixing bracket plus

Dimensions



A	B	C	D	E	ØF
